CPai Setup Guide

CPai is composed of 4 parts:

1. Dialogflow service provided by Google
2. Backend written in Python/Flask
3. Client written in Javascript(Node) - this is another backend that hosts Google Client for interacting with Dialogflow
4. Frontend written in Javascript(Vue)

Import CPai Dialogflow engine

1. Open the existing agent you would like to export from/import into in DialogFlow On the left-hand list, go to the top and click on the settings icon next to your agent name

2. Click on the Export/Import tab

If exporting, "Export as zip", if importing, "Import from zip" and choose cpai_dialogflow_engine.zip .

3. After setting up the *backend*, also make sure the url of the backend is updated in the Dialogflow console.
